➤ EDUCATION

YANGON UNIVERSITY

- Microbiology (2018-2019)

YOUTH RESOURCE COLLAGE

- Diploma in IT computing (2023-2024)

➤ SKILLS

- HTML- Advance
- CSS - Intermediate
- JS - Advance
- React - Intermediate
- Redux - Beginner
- NodeJs - Beginner
- Next js - Intermediate
- C++ - Beginner
- Java - Beginner
- Graphql - Beginner
- Problem-solve
- Strong Communication
- Team Collaboration
- Self-Learning and Self-Motivation

➤ LANGUAGE

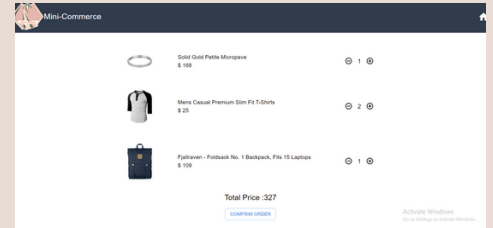

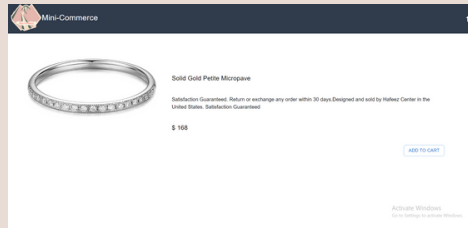

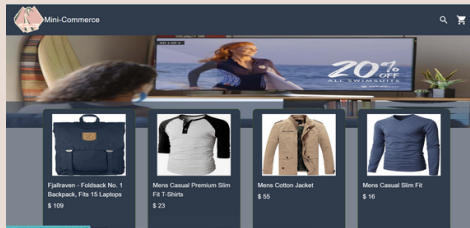

- English - Intermediate
- Thai - Beginner

PROJECTS

1. Mini-commerce

In my first Next.js project, It included a database. This project is like an Amazon website. I used Swiper to display ads with motion slides. I faced challenges with APIs, routes, database connections, data transfer, and rendering, but managed to overcome them in the end.

2. Foodie POS

This is my second Next.js project .It is a POS website with admin and client sides. I had some challenges displaying ordered data from the database, but I solved it with complex functions. Additionally, I also got some issues with NextAuth for sign in/sign out, but I resolved it by adding a Gmail account as a test user in NextAuth..

3. Cigarette Admin

My first job project as a freelancer. It's not like selling website. It included only admin side. It showcase the data of agents and the data of remain woods of cigarette industry. I had to solve date-related issues using new Date() and date properties, and I used tableRef() to address printing problems. Also had internal server error where server connect to the database. So I wrote dbTest API to know what the error was.
